

Buckeye®

FEATURES:

- Water-Emulsified
- Non-Flammable
- Economical
- Pleasant Scent
- Non-Filming
- Makes Laundering Mops & Cloths Easy
- Ready-to-Use
- Convenient Packaging

Also part of the:

AQUA DUST™

WATER-EMULSIFIED DUST MOP CONDITIONER

Buckeye **Aqua Dust**, the ready-to-use dust mop conditioner, provides all the benefits of old-fashioned dust mop treatments without the complications.

Some of the disadvantages of old-fashioned dust mop conditioners include oily films and residues that re-attract dirt and dust. Additionally, fresh coats of floor finish will not adhere properly. These disadvantages result in unsightly discolored floors and wasted time and money.

Buckeye's dust mop conditioner is different. **Aqua Dust** makes dust mopping more efficient and does not leave a residue on floors. Why not join the countless number of customers who have already made the switch to Buckeye **Aqua Dust**? This modern water-emulsified dust mop conditioner provides the most efficient use of time, labor, and materials, without all those old-fashioned disadvantages.

Formulated specifically for the conditioning of dust mops and cloths, this ready-to-use, pleasantly scented formula attracts and holds dust particles for thorough removal. Special ingredients in this unique formula provide a magnetic property to conditioned mops and cloths in order to prevent the scattering and re-depositing of dust particles.

Aqua Dust's special emulsifiers act as an internal laundering system to allow soiled mops and cloths to be machine-washed, thereby saving time and money. Treated mops may be machine-washed with or without the addition of laundry detergent.

Water-emulsified **Aqua Dust** may be used on all types of flooring, furniture, Formica®, metal and painted surfaces... virtually anywhere dust control is desirable.

AQUA DUST™

WATER-EMULSIFIED DUST MOP CONDITIONER

DIRECTIONS FOR USE:

Treatment

Dust mops or cloths may be treated by several methods:

Method 1: Spray evenly over the mop surface with a spray bottle. Fluff the strands of the mop, and spray again. Periodic single sprayings of the mop will revitalize the dust pick-up ability. If the mop glazes or becomes too dirty, it should be laundered.

Method 2: In a sink or container large enough to hold the untreated mops or dust cloths, mix a solution of two (2) parts **Aqua Dust** to one (1) part water, and totally immerse the articles to be treated. Soak mops or cloths until fibers are thoroughly penetrated. Wring out excess and hang up to dry. Mops or cloths are ready-to-use within 24 hours.

Laundering

When the mops or cloths become soiled, they should be placed in an “open net” laundry bag or wrapped and tied in single layer of cheese-cloth and simply washed through a household or commercial washer. Under normal conditions, the self-laundering action of **Aqua Dust** will require no additional laundry detergent.

Under extreme soil conditions, add 1/2 cup of Buckeye **Dets**™ or **Echo**™ to each wash load.

Available in:

Technical Specifications

Flash Point	None
% Actives	17.6 ± 0.2%
% Free Alkali	None
pH (Concentrate)	7.2 ± 0.2
Color	White Emulsion
Weight/Gallon	8.1 lbs.
Stability	Excellent

*In case of freezing, simple mixing will re-establish emulsion after product has thawed.
