Symmetry Hand Hygiene is firmly established as offering the most accepted hand hygiene formulas on the market. This is demonstrated regularly at any Symmetry Challenge.

While our preferred formulas contribute significantly to increasing compliance, they are one part of the Symmetry Hand Hygiene Program. A complete program is needed to maximize compliance rates in your facility.

Symmetry Hand Hygiene offers a complete set of customizable education and awareness tools to assist in creating a culture of hand hygiene. These are informative pieces focusing on the "how" and "why" of proper hand hygiene.

To further maximize compliance we have introduced the Symmetry Behavior Modification System (SBMS). As the newest element of the Symmetry Hand Hygiene Program, the SBMS is a set of unique, cost effective tools, based on six key tenets, designed to INSPIRE hand hygiene compliance. Different from education and awareness, the goal of SBMS is to provide tools that capture attention in the moment, driving an immediate hand hygiene event to take place.

Symmetry Behavior Modification System

Unlike negative motivators, SBMS is based on six key tenets that offer a positive approach designed to inspire. Each tenet offers a unique way to drive compliance.

#1 BENEVOLENCE
The disposition to do good

#2 RESPONSIBILITY
Others expectations and/or requirements

#3 ACCOUNTABILITY
Willingness to accept responsibility and comply

#4 VARIATION
A change in form, substance, or position of something

#5 EMOTION
Strong feelings towards something

#6 DIRECTION
Instructional and guided statements to prompt action

Visual Lighting Cue (VLC)
The American Journal of Infection Control (AJIC) published a study to measure hand hygiene compliance using visual lighting cues (VLCs). The study concluded that a flashing light affixed by hand hygiene dispensers increased hand hygiene compliance to approximately double. In the study, the light drew attention to the dispensers, which reminded people to practice hand hygiene.

Symmetry VLCs are available in amber (yellow) and red, and may also be customized in several other color choices. Symmetry VLCs can even be set to specific flash frequencies.
